

Fairview Microwave Inc.®

REACH is a European program (EC1907/2006) to identify hazardous chemicals used in all industries.

Key Points of REACH:

REACH applies to Substances, Preparations, and Articles; Fairview Microwave products are classified as Articles. Articles require no registration unless certain conditions are met

REACH identifies substances of very high concern (SVHC). This list is updated every 6 months. Fairview Microwave has reviewed the updated list of 6/2011.

Registration is required if SVHC's > 0.1% by weight are present and if the Article has an intended release of the SVHC.

Fairview Microwave does not use any SVHC's in our manufacturing processes.

Fairview Microwave products do not have an intended release of any SVHC's.

Fairview requires its suppliers via terms and conditions of every purchase order to identify any product containing SVHC's; to date no SVHC's have been identified.

Fairview Microwave believes that for the vendors supplying us, our purchased materials do not require the use of any SHVC > 0.1% by weight, and we would be surprised if any SVHC was used at all. If any SHVC exists, there would not be any intended release of the SVHC.
