The FMAM4052 includes a temperature sensor label on the side of the package. A heatsink and optional cooling fan is required for reliable operation of this design. The baseplate temperature should be monitored and maintained not exceed +50°C. Operation above +50°C baseplate temperature will likely cause eventual damage to the device. Any elevated temperature level running >50°C will become registered on the temperature sensor label. If the label is removed the warranty will be voided.
