

# SP6T Latching 0.03 dB Low Insertion Loss Repeatability DC to 20 GHz Terminated Relay Switch, Indicators, Self Cut Off, TTL, 70W, 24V, SMA

The FMSW6339 is a single pole six throw (SP6T) terminated electromechanical switch that operates across a wide frequency range from DC to 20 GHz and has guaranteed insertion loss repeatability of 0.03 dB max over a life span of 10 million switching cycles in a Break Before Make condition. Maximum Insertion loss is 0.2 dB and Isolation is rated up to 85 dB minimum. The model also supports a hot switching limit of up to 1W CW maximum. The TTL logic controled, Latching, Self Cut-Off actuator design includes indicators, a +24 Vdc operating voltage, and operates over a temperature range of -25°C to +75°C. The rugged and compact package assembly supports SMA connectors and an HE10 receptacle, ribbon cable, and HE10 connector for command control capability. And for highly reliable operation, the model is guranteed to meet MIL-STD-202 environmental test conditions that include temperature cycle, vibration, and shock.

### Features:

- DC to 20 GHz SP6T Switch
- Guaranteed Low Insertion loss Repeatability: 0.03 dB max over 10 Million Lifecycles
- Insertion Loss: 0.6 dB max
- Isolation: up to 80 dB min
- +24 Vdc Nominal Voltage
- Hot Switching: 1W CW max
- TTL Logic Control
- Latching Self Cutoff Actuator
- Position Indicators
- Guaranteed to meet MIL-STD-202 Environmental Conditions
- SMA connectors
- HE10 receptacle with ribbon cable and HE10 connector
- -25°C to +75°C Operating Temperature
- 10 Million Lifecycles Minimum

# Applications:

- · Electronic Warfare
- Electronic Countermeasures
- · Microwave Radio
- VSAT
- Radar
- Space Systems
- Test Instrumentation
- Research and Devlopment
- Signal Monitoring Devices

The electronic position indicators use photo-MOS transistors which are driven by the mechanical position of the RF paths moving elements. The circuitry consists of a common which can be connected to an output corresponding to selected RF path. If one or several RF paths are closed, the corresponding indicators are connected to the common. The photo-MOS transistors are configured for AC and/or DC operation. The electronic position indicators require the supply (20 to 32 VDC) to be connected to pin 1 and ground connected to pin 15.

# Switch Connector

#### TTL drive

- •Connect pin 15 to ground.
- •Connect pin 1 to supply (+20 VDC to +32 VDC)
- •Select (close) desired RF path by applying TTL "High" to the corresponding "drive" pin (Ex: apply TTL "High" to pin 3 to close RF path 1).
- •To select another path, ensure that all unwanted RF path "drive" pins are in TTL "Low" position (to prevent multiple RF path engagement). Apply TTL "High" to the "drive" pin which corresponds to the desired RF path.
- •To open all RF paths, ensure that all RF path "drive" pins are in TTL "Low" position. Complete the operation by applying TTL "High" to pin 16.

#### Break-Before-Make

Open the undesired RF path. After 15 ms (minimum), close the new RF port.

#### Make-Before-Break

Ensure that the previously selected RF path "drive" is connected to TTL "High" then close the new RF path.
